

Mfumo mmoja unaoendesha hospitali nzima — kutoka mapokezi hadi ripoti ya wizara.

Umeandaliwa kwa hospitali za wilaya, vituo vya afya na zahanati. Kila skrini kwenye kitabu hiki ni picha halisi ya mfumo ukifanya kazi, siyo mchoro wa kubuni.

141

skrini za kazi

23

makundi ya huduma

553

2

lugha: Kiswahili / English

Yaliyomo

1. Kwa nini mfumo huu Tatizo linalotatuliwa	2. Mfumo kwa muhtasari Muundo na sehemu zake
3. Safari ya mgonjwa Hatua 10, mwanzo mwisho	4. Idara kwa idara Kila kitengo na skrini zake
5. Fedha na uwajibikaji Pesa haipotei kimya kimya	6. Hospitali kubwa na zahanati Mfumo mmoja, saizi mbili
7. Usalama na kumbukumbu Nani aliona, nani alibadilisha	8. Ripoti na bima HMIS, IDSR, NHIF
9. Simu na kompyuta binafsi API iliyoandikwa kikamilifu	10. Kuanza: nini kinahitajika Vifaa, mtandao, mafunzo
11. Yasiyokuwepo bado Tunachosema wazi	12. Maswali ya kawaida Majibu mafupi
13. Kiambatisho: skrini zote Picha za skrini zote	

Kwa nini mfumo huu

Hospitali nyingi zinaendeshwa kwa madaftari matano yasiyoongea: daftari la mapokezi, la maabara, la famasia, la mahesabu, na la wafanyakazi. Mgonjwa mmoja anaandikwa mara tano, na mwisho wa mwezi hakuna mtu anayejua kwa uhakika ni kiasi gani kilipatikana, ni dawa ngapi zimetoka, wala ni wagonjwa wangapi hawakurudi.

Kuandika mara moja

Mgonjwa anasajiliwa mara moja tu. Maabara, famasia, wodi na uhasibu wote wanasoma faili moja — hakuna kuandika upya wala majina yanayotofautiana.

Kila senti inafuatiwa

Huduma inayotolewa inatengeneza ankara; malipo yanatengeneza risiti; vyote vinaingia kwenye leja. Hakuna njia ya pili ya kupokea fedha.

Foleni inayoonekana

Uongozi unaona kwa wakati halisi ni wagonjwa wangapi wanasubiri, wanasubiri kwa muda gani, na wamekwama wapi.

Ripoti bila kukesha

Ripoti za HMIS na ufuatiliaji wa magonjwa zinatoka kwenye kazi ya kila siku, siyo kwa kupiga hesabu za madaftari usiku wa kuamkia tarehe ya mwisho.

Kila kitendo kina jina

Nani alifuta ankara, nani alitoa punguzo, nani alitoa dawa — kumbukumbu inaandikwa na seva yenyewe, na haiwezi kufutwa na mtumiaji.

Kiswahili na Kiingereza

Menyu na maelekezo yapo kwa lugha zote mbili. Mfanyakazi anachagua lugha yake mwenyewe; rekodi za kitabibu zinabaki Kiingereza kama zilivyo kwenye fomu za taifa.

Mfumo kwa muhtasari

Sehemu zote zinazoonekana hapa zinaishi kwenye seva moja ya hospitali. Wafanyakazi wanaingia kwa kivinjari; simu na kompyuta binafsi zinatumia lango lilelile.

Lango moja tu ndilo linalofunguliwa nje. Kila ombi linapita hapo, linathibitishwa, na linaandikwa kwenye kumbukumbu — hakuna njia ya kando ya kufikia rekodi.

Dashibodi ya siku Kila kitengo kwa mtazamo mmoja: waliopokelewa, wanaosubiri daktari, vitanda, vipimo, dawa zilizopungua, na fedha za siku.

Safari ya mgonjwa, mwanzo mwisho

Hatua kumi kutoka mlangoni hadi rekodi ya mwisho. Kila hatua inaonyesha kile mfanyakazi anachofanya, na kile mfumo unachozuia kisitokee.

Mapokezi: kusajili au kumtambua anayerudi

Mgonjwa mpya anasajiliwa kwa fomu moja: jina, jinsia, umri, simu, mkoa, ndugu wa karibu, na bima kama anayo. Mfumo unatoa namba ya faili (MRN) mwenyewe. Anayerudi anatafutwa kwa jina, namba ya simu au namba ya faili — halisajiliwi upya.

Kinachozuiliwa: namba ya taifa iliyotumika tayari inakataliwa na daftari, hivyo mtu mmoja hawezi kuishia na faili mbili.

Daftari la wagonjwa wote

Ada ya faili na ya daktari

Hospitali inaweka ada zake yenyewe kwenye orodha ya bei. Ikiwa imechaguliwa kukusanya kabla ya kuonana na daktari, mgonjwa analipa mapokezi na risiti inatoka papo hapo. Mwenye bima haulizwi fedha — dai linatengenezwa badala yake.

Appearance

What these two fees are

They are the charges reception raises, automatically, in the same transaction that opens the attendance — so a registered patient always has a bill. Everything else a patient is charged for is raised by the department that does the work: the laboratory when a test is ordered, the pharmacy when medicine is handed over.

Opening a file

Not charged

Charged ONCE, the first time a person is registered.
A patient who comes back next month already has a file and is not charged again — not by a second visit, and not by two clerks registering them at two counters at once.

Price list code

REG

Which tariff carries this fee. Leave it empty if this hospital does not charge for it. Suggested: REG

Amount (cash patients)

—

Written to the price list. A scheme patient is charged that scheme's price for the same code — set those on the Service Tariffs screen.

Seeing a doctor

Not charged

Charged per attendance, and only when reception says the patient is seeing a doctor.
Somebody collecting a repeat prescription or coming for a dressing change is not charged this. The tick is on the reception screen, beside the patient.

Price list code

CONSULT

Which tariff carries this fee. Leave it empty if this hospital does not charge for it. Suggested: CONSULT

Amount (cash patients)

—

Written to the price list. A scheme patient is charged that scheme's price for the same code — set those on the Service Tariffs screen.

When the money is collected

Pay before being seen

On: a patient who owes anything is sent to the cashier first, and goes on to triage once the payment lands. Off: they go straight through and the bill is collected on the way out.

Mtiririko wa mgonjwa

Foleni: kila mtu anajua zamu yake

Bodi ya foleni inaonyesha namba na kituo. Wauguzi na madaktari wanaona orodha ileile: nani anasubiri, amesubiri dakika ngapi, na yupo hatua gani.

Bodi ya foleni (ukumbi wa kusubiri)

Triage: vipimo vya awali

Muuguzi anapima joto, shinikizo la damu, mapigo, uzito na kiwango cha oksijeni. Vipimo hivi vinabaki kwenye faili la mgonjwa milele, na daktari anaviona kabla hajaanza.

Kinachozuiliwa: kupima si kuandika matibabu. Muuguzi wa triage hawezi kuandika uchunguzi wa daktari, na daktari hahitaji ruhusa ya ziada kupima.

The screenshot shows the 'Triage' section of a hospital management system. The interface includes a sidebar with navigation options like 'Muhtasari', 'Mapokezi', 'Wagonjwa', 'Mahudhuro', 'Kliniki', and 'Uchambuzi wa Awali'. The main content area displays the 'Triage' title and a description: 'Observations, and the acuity that re-orders every queue in the building.' Below this, there are four status boxes: 'Waiting for triage' (0), 'In the building' (16), 'No acuity yet' (0), and 'Longest wait' (1h 42m). A large central area shows 'Nobody waiting for triage' with a heart icon. The bottom of the sidebar shows the user 'admin' with the role 'SYSTEM_ADMIN'.

Status	Count
Waiting for triage	0
In the building	16
No acuity yet	0
Longest wait	1h 42m

Uchambuzi wa awali

Chumba cha daktari

Daktari anaandika historia, uchunguzi, utambuzi na mpango wa matibabu. Kutoka skrini hiyohiyo anaagiza vipimo, anaandika dawa, anampa rufaa au anamlaza.

Uchunguzi na maelezo

Maabara na picha

Agizo linafika maabara likiwa na jina, namba ya faili na sababu. Mtaalamu anaingiza majibu; majibu yanayovuka mipaka hatarishi yanawekwa kwenye orodha ya dharura ili mtu aone na kuthibitisha kuwa ameyaona.

Macho mawili: aliyeingiza majibu hawezi kuwa ndiye anayeyaidhinisha. Mfumo unakataa, hata kama mtu ana ruhusa zote mbili.

Majibu na uthibitisho

Famasia: dawa zinatoka kwenye rafu na kwenye hesabu

Mfamasia anaona agizo la daktari, anatoa dawa, na hifadhi inapungua kwenye mfumo wakati uleule. Betchi na tarehe ya mwisho wa matumizi vinafuatiliwa, na dawa zinazokaribia kwisha muda zinaonekana mapema.

Hifadhi ya dawa

Kulazwa: wodi, kitanda na chati

Mgonjwa anapangiwa kitanda halisi kwenye wodi halisi. Kazi za uuguzi na dozi za dawa zinapangwa kwa saa, na gharama ya kitanda inaingia kwenye ankara kila usiku bila mtu kukumbushwa.

Kituo cha wauguzi

Ankara, risiti na bima

Kila huduma iliyotolewa inaingia kwenye ankara moja ya mgonjwa. Mhasibu anapokea fedha — taslimu, simu au kadi — na risiti inachapishwa. Kwa mwenye bima, dai linaandaliwa kwa mfuko wake pamoja na asilimia inayogharamiwa.

HMIS Returns

Counted from the records themselves, month by month, with what cannot be counted named.

Month

Year

September

2026

Indicators counted

21

from the operational tables

Cannot be counted

4

must be completed by hand

4 indicators cannot be filled in from this system

They are listed below with the reason, and left blank rather than returned as zero. A zero on a national return means "none happened" — sending that when the truth is "we do not collect this" misleads a district into planning around a service it thinks nobody uses.

Outpatient

Code	Indicator	September	Previous	Change
OPD-01	Total outpatient attendances	16	0	+16
OPD-09	Referrals out	6	0	+6
OPD-04	Malaria cases confirmed Diagnoses are coded free-text; there is no malaria test result linked to a diagnosis.			Not collected — leave blank

RCH

Code	Indicator	September	Previous	Change
RCH-01	Antenatal bookings	6	0	+6
RCH-02	Antenatal contacts attended	0	0	same
RCH-05	Pregnancies with three or more IPTp doses	0	0	same

Emergency & Casualty

Everybody in the department, sickest first — with the untriaged at the top.

RefreshRecord an arrival

3 patients past the time their triage category allows
 Somebody categorised correctly and then not looked at again is the failure this alarm exists for. It is a different problem from nobody having triaged them at all.

In the department
4

Resuscitation
1

Unseen over an hour
4

Past their time
3
triated, then forgotten

ACUTY	PATIENT	COMPLAINT	ARRIVED	SEEN	STATUS
1 · Resuscitation past their time	Joseph Mrema PRN-000034	Ajali ya pikipiki	1h 33m ambulance	not yet	WAITING
2 · Emergency past their time	Baraka Mrema PRN-000034	Maumivu makali ya kifua	1h 33m walk in	not yet	WAITING
3 · Urgent past their time	Fatuma Mushi PRN-000031	Degedege kwa mtoto	1h 33m other	not yet	WAITING
4 · Less urgent	Zainabu Mushi PRN-000031	Kuongua kwa maji ya moto	1h 33m referred	not yet	WAITING

Dharura na ajali

Afya ya mama na mtoto

Kliniki ya ujauzito, uchungu na kujifungua, huduma baada ya kujifungua, uzazi wa mpango, chanjo na ufuatiliaji wa ukuaji. Kila huduma hapa ni ratiba ambayo mtu anaweza kuikosa — hivyo kila orodha ina kichujio cha "waliochelewa".

Kliniki ya ujauzito

Chanjo (EPI)

Kliniki za programu

Kifua kikuu, tiba na matunzo ya VVU, na magonjwa sugu yasiyoambukiza. Kila mgonjwa ana kundi, hatua ya matibabu, na tarehe ya kurudi — na wasiorudi wanaonekana kwenye orodha moja badala ya ripoti mtu anayopaswa kukumbuka kuiendesha.

Kliniki ya kifua kikuu

Chumba cha upasuaji

Ratiba ya vyumba, timu ya upasuaji, orodha ya ukaguzi wa usalama, na hesabu ya vifaa vilivyoingia na kutoka. Upasuaji haufungwi kama hesabu hazilingani — na hilo si suala la cheo cha mtu, ni kanuni ya mfumo.

Chumba cha upasuaji

Ghala, manunuzi na wasambazaji

Kutoka oda ya manunuzi, hadi kupokea mzigo, hadi ankara ya msambazaji, hadi malipo. Hatua nne, watu tofauti — ndiyo maana msambazaji hawezi kulipwa kwa mzigo ambao haujawahi kufika.

Bidhaa na dawa

Manunuzi

Rasilimali watu na mishahara

Wajiriwa, nafasi za kazi, mahudhurio ya kazi, likizo, ajira mpya, mafunzo, nyaraka za mfanyakazi, na mishahara. Mishahara ina hatua tatu: kuandaa, kuhesabu, na kuidhinisha — na aliyeandaa si anayeidhinisha.

Wajiriwa

Mishahara

Huduma saidizi

Benki ya damu, chumba cha maiti, magari ya wagonjwa, na mali na matengenezo. Kila kimoja kinawashwa tu kwenye tawi lenye huduma hiyo.

Fedha na uwajibikaji

Sehemu ngumu zaidi ya hospitali si kutibu — ni kuhakikisha kile kilichotolewa kimelipiwa, na kile kilicholipwa kimeingia benki. Mfumo huu unashika hatua zote kwenye njia moja.

Vidhibiti vilivyojengwa ndani

KITENDO	NANI ANARUHUSIWA	KWA NINI
Kutoa punguzo kwenye ankara	Ruhusa yake pekee	Punguzo ni njia halali ya fedha kutoka — na pia njia isiyo halali.
Kufuta ankara	Ruhusa nyingine tofauti	Aliyeitengeneza ankara asiwe ndiye anayeifuta.
Kurudisha malipo	Ruhusa ya juu kabisa ya kaunta	Ni fedha inayotoka mkononi baada ya kuingia.
Kubadilisha kuingizwa kwenye leja	Hairuhusiwi kwa mtu yeyote	Kosa linarekebishwa kwa kuingiza kinyume chake, ili historia ibaki.
Kuchapisha noti ya krediti	Ankara iliyolipwa pekee	Noti ya krediti dhidi ya deni hai ni hati ya uongo.
Kulipa msambazaji	Baada ya oda, risiti ya mzigo na ankara kulingana	Hii ndiyo inayozuia malipo ya mzigo usiokuwepo.

Fedha zilizopo mkononi

Madeni ambayo hayajalipwa

Hati zinazochapishwa: ankara, risiti, noti ya krediti, taarifa ya mgonjwa, vocha ya matumizi, oda ya manunuzi, hati ya malipo kwa msambazaji, na slipu ya mshahara — zote zinatoka kwenye mfumo zikiwa na jina, nembu na anwani ya hospitali.

Hospitali kubwa na zahanati ndogo

Mfumo ni mmoja. Kinachotofautiana ni kile kilichowashwa kwenye kila tawi. Zahanati isiyo na chumba cha upasuaji haioni menyu ya upasuaji hata kidogo — na wala haiwezi kufungua ukurasa huo kwa kuandika anwani yake.

Hospitali ya wilaya · District hospital

- ✓ Mapokezi, wagonjwa, mahudhurio
- ✓ Maabara na picha (X-ray, ultrasound)
- ✓ Wodi, kulazwa, chumba cha upasuaji
- ✓ Benki ya damu, chumba cha maiti
- ✓ Kliniki za TB na CTC, meno, macho
- ✓ Gari la wagonjwa, manunuzi, uhasibu kamili
- ✓ Rasilimali watu na mishahara

≈ 141 skrini zimewashwa

Zahanati · Dispensary

- ✓ Mapokezi, wagonjwa, mahudhurio
- ✓ Vipimo vya haraka (RDT, sukari)
- ✓ Famasia na ghala dogo
- ✓ Kliniki ya mama na mtoto, chanjo
- ✓ Malipo, risiti, madeni, ripoti za HMIS
- X Chumba cha upasuaji — hakipo
- X Benki ya damu, chumba cha maiti — havipo

≈ 60 skrini zimewashwa; nyingine zimefichwa

Kuwasha au kuzima ni kazi ya msimamizi, si ya fundi wa kompyuta. Inafanyika kwenye skrini moja, na sababu inaandikwa — ili mtu atakayeuliza "kwa nini menyu hii haipo?" apate jibu badala ya kukisia.

Moduli na huduma — swichi za tawi Zilizozimwa zinatoweka kwenye menyu ya kila mfanyakazi wa tawi hilo, na API inakataa maombi yake.

Matawi mengi, mfumo mmoja

Hospitali yenye vituo vya kando inaviendesha vyote kwenye mfumo mmoja. Kila tawi linaona rekodi zake; uongozi wa juu unaona vyote kwa pamoja. Mfanyakazi anayehudumu tawi moja haoni fedha wala wagonjwa wa tawi jingine.

Usalama, ruhusa na kumbukumbu

Rekodi ya mgonjwa ni siri ya kisheria. Mfumo hauzuii tu kwa kuficha vitufe — seva yenyewe inakataa ombi la mtu asiye na ruhusa, hata kama ameandika anwani moja kwa moja.

Ruhusa kwa kila kitendo

Zaidi ya ruhusa 160 tofauti. Mhasibu anaona fedha, si majibu ya maabara; muuguzi anaona chati, si mishahara.

Kumbukumbu isiyofutika

Kila kitendo kinaandikwa na seva: nani, lini, kitu gani. Hakuna njia ya mtumiaji kuandika au kufuta kwenye kumbukumbu hiyo.

Macho mawili

Majibu ya maabara, mishahara, matumizi na kurudisha fedha — vyote vina mtu wa kuandaa na mtu mwingine wa kuidhinisha.

Akaunti za wafanyakazi

Hakuna kujisajili mwenyewe. Msimamizi ndiye anayefungua akaunti, anaipa majukumu, na anaweza kuisimamisha siku mfanyakazi anapoondoka.

Kumbukumbu za mfumo

Kuhusu mtandao unapokatika: mfumo hausemi uongo. Ukikatika, skrini inaonyesha wazi kuwa hakuna mtandao na kwamba kilichoandikwa hakitahifadhiwa — badala ya kuonyesha

alama ya "imehifadhiwa" kwa kitu ambacho hakijafika seva.

Ripoti za kitaifa na bima

Takwimu za HMIS zinajengwa kutoka kwenye mahudhurio, utambuzi na huduma zilizotolewa. Magonjwa ya kuarifiwa (IDSR) yanaandikwa yanapotokea, na yale ya dharura yanawekwa alama ya kuarifiwa mara moja.

Ufuatiliaji wa magonjwa (IDSR)

Madai ya bima

Kwa upande wa bima: mifuko inasajiliwa na asilimia yake ya ugharamiaji, dai linaandaliwa kutoka kwenye ankara halisi, na hatua zake zinafuatiliwa hadi linapolipwa au kukataliwa — pamoja na sababu.

Simu ya mkononi na kompyuta binafsi

Mfumo unafunguliwa kwa kivinjari kwenye kompyuta yoyote ya hospitali — hakuna programu ya kusakinisha kila mashine. Kwa wanaotaka app ya simu au programu ya desktop (kwa mfano kwa ajili ya printa za risiti au kisoma-bakodi), API yote imeandikwa kikamilifu: njia 553, pamoja na faili ya Postman na OpenAPI kwa watengenezaji.

Wodi

Kupima vitals, kuona chati na kusonga foleni kwa kishikwambi.

Kaunta

Programu ya desktop inayochapisha risiti moja kwa moja kwenye printa.

Mgonjwa

Portal ya mgonjwa: miadi, majibu yaliyoruhusiwa, ankara na ujumbe.

English [Kiswahili](#)

Skrini ya kuingia Jina na nembo ya hospitali yenyewe, si ya muuzaji wa mfumo.

Kuanza: nini kinahitajika

KIPENGELE	ZAHANATI / KITUO CHA AFYA	HOSPITALI YA WILAYA
Seva	Kompyuta moja imara (8GB RAM) au seva ya wingu	Seva ya kweli (16GB+), au wingu
Kompyuta za watumiaji	2 – 5	15 – 60
Mtandao	LAN ya ndani; intaneti si lazima kwa kazi ya kila siku	LAN imara; intaneti kwa bima na ripoti
Umeme	UPS kwa seva	UPS na jenereta
Printa	Moja ya risiti	Risiti, ankara, na lebo
Mafunzo	Siku 2	Siku 5 – 10, kwa vitengo

Hatua za usakinishaji

1. **Wiki 1 — Kuweka mfumo.** Seva, mtandao, na kuingiza wasifu wa hospitali: jina, nembo, matawi, idara, na orodha ya bei.
2. **Wiki 2 — Watumiaji na ruhusa.** Kufungua akaunti za wafanyakazi na kuwapa majukumu yanayolingana na kazi zao halisi.
3. **Wiki 3 — Mafunzo kwa vitengo.** Mapokezi na kaunta kwanza, kisha kliniki, maabara na famasia, mwisho uhasibu.
4. **Wiki 4 — Kuanza kwa hatua.** Kuanza na mapokezi na malipo pekee kwa siku chache, kisha kuongeza vitengo vingine hadi vyote viwe ndani.
5. **Kuendelea — Hifadhi nakala.** Nakala ya kila siku, na jaribio la kurejesha mara moja kwa mwezi. Hifadhi ambayo haijawahi kujaribiwa si hifadhi.

Yasiyokuwepo bado

Tunayaeleza wazi, kwa sababu kugundua baadaye ni gharama kubwa zaidi kuliko kuambiwa mapema.

- **Risiti za kielektroniki za TRA (EFD).** Mfumo unachapisha risiti zake zenye namba na kumbukumbu kamili, lakini bado hauunganishwi moja kwa moja na mashine ya EFD.
 - **Kutuma SMS.** Mfumo unaandaa ujumbe na kuuweka kwenye foleni, lakini hospitali inahitaji akaunti ya lango la SMS ili ujumbe utoke kweli.
 - **Kufanya kazi bila mtandao kabisa.** Kompyuta lazima iwe imeunganishwa na seva ya hospitali. Ikikatika, mfumo unasema wazi badala ya kuhifadhi kimyakimya.
 - **Vifaa vya maabara vinavyojiunganisha vyenyewe.** Majibu yanaingizwa na mtaalamu; muunganisho wa moja kwa moja na mashine ni kazi ya baadaye.
-

Maswali yanayoulizwa mara kwa mara

Je, tunaweza kuanza na vitengo vichache tu?

Ndiyo, na ndiyo njia inayoshauriwa. Anza na mapokezi na malipo; ongeza maabara, famasia na wodi mfululizo. Vilivyozimwa havionekani kabisa kwenye menyu.

Rekodi zetu za zamani zitaingiaje?

Daftari la wagonjwa linaweza kuingizwa kwa faili (majina, namba za faili, simu, bima). Rekodi kamili za kitabibu za nyuma kwa kawaida hazihamishwi — hospitali huanza upya kwa wagonjwa wanaokuja, na daftari la zamani linabaki kama kumbukumbu.

Data yetu inakaa wapi?

Kwenye seva ya hospitali yenu, au seva ya wingu mliyoichagua. Rekodi za wagonjwa hazitoki hapo — isipokuwa mkiamua wenyewe kuwasha msaada wa AI unaotumia huduma ya nje, ambao umezimwa mpaka mtakapouwasha na kuweka ufunguo wake.

Umeme ukikatika wakati wa kazi?

Kilichohifadhiwa kimehifadhiwa. Kwa sababu kila kitendo kinatumwa seva mara moja, kilichopotea ni fomu iliyokuwa mkononi tu — siyo kazi ya siku nzima. UPS kwenye seva ndiyo kinga muhimu zaidi.

Tunaweza kuona ni nani alifanya nini?

Ndiyo. Kila kitendo kina jina la aliyekifanya na saa. Kumbukumbu hiyo haiwezi kuhaririwa na mtumiaji yeyote, wa ngazi yoyote.

Kiambatisho: skrini zote za mfumo

Picha zote zilizo hapa chini zilipigwa kwenye mfumo halisi ukiwa na data ya mfano ya hospitali ya kufikirika. Hakuna rekodi ya mgonjwa halisi iliyotumika.

Receivables

What is owed to the hospital, counted from the bills themselves.

Owed to you

TSh 47,500

Over 30 days

TSh 0

Oldest

the one to try this morning

PAYER	CURRENT	1-30	31-60	61-90	OVER 90	TOTAL
cash + bill oldest 0 days	TSh 47,500	—	—	—	—	TSh 47,500
1 payers						TSh 47,500

Counted from the bills themselves rather than from a separate debtors table. Two records of the same debt disagree by the end of the month, and the one on the statement is the one that gets argued with.

Hospitali ya Wilaya ya Mfano ni hospitali ya kufikirika iliyotumika kuandaa kitabu hiki. Majina, namba za simu, ankara na majibu yote ni ya kubuni.

Mwongozo huu unaambatana na nyaraka za API kwa watengenezaji (docs/api) kwa yeyote anayetaka kuunganisha mfumo mwingine au kujenga app.
